The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

The present invention describes an expression vector (I) comprising in frame and in order, a presequence, and a cloning site for the in frame insertion of catalytic domain cassette. (I) can be used as a modulator of proteins expressed from a zymogen activation construct. The recombinant catalytic domain of serine protease is useful for identifying compounds modulating the activity of proteases. Is expressed and activated from the zymogen activation construct. A method from the present invention comprises combining a modulator of the modulator on the protein of a protease and mesuring an effect of the modulator on the protein preferably inhibiting or enhancing its enzymatic activity or stimulation or inhibition of proteolysis mediated (b) the expressed catalytic domain. The present sequence represents a fusion gene with a human serine protease catalytic domain protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ζ,

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

pancreatic elastase (EC 3.4.21.36) IIIB precursor - human
N'Alternate names: 35K glycoprotein; pancreatic protein P35; protein G32; proteinase
C;Specias: Homo sapians (man)
C;Date: 15-Dec-1988 #sequence_revision 15-Dec-1988 #text_change 22-Jun-1999
C;Accession: B29934; A90516; A27206; A33257; A28932; S04999; S04490
R;Tani, T; Ohsumi, J; Mite, K.; Takiguchi, Y.
J: Biol. Chem. 263, 1231-1239, 1988
A;Title: Identification of a novel class of elastase isozyme, human pancreatic elasta
A;Reference number: A92664; MUID: 88087253; PMID: 2826474
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A; Accession: S04999

A; Title: Structure of chymotrypsinogen B compared with chymotrypsinogen A and trypsinoge
A; Recence number: A00953; MUD: 68238908; PMID: 5649671
A; Recence number: A00953; MUD: 68238908; PMID: 5649671
A; Recence number: A00953
A; Molecule type: protein
A; Recence number: A00953
C; Comment: Chymotrypsinogen B is synthesized, along with chymotrypsinogen A, in the acin C; Comment: The first activation cleavage, leading to pi-chymotrypsin B, occurs in the sact C; Superfamily: trypsin homology
C; Superfamily: trypsin perpetide #status experimental <ARAT>
F; 1-15/Domain: propeptide #status experimental <ARAT>
F; 1-245/Forduct: chymotrypsin B #status experimental <AMAT>
F; 1-245/Forduct: chymotrypsin homology <ARX>
F; 1-245/Forduct: chymotrypsin homology <ARX>
F; 1-122, 42-58, 136-201, 168-182, 191-220/Disulfide bonds: #status experimental
F; 57, 102, 195/Active site: His, Asp, Ser #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ij

A;Title: Characterization of pancreatic elastase II cDNAs: two elastase II mRNAs are A;Reference number: A90958; MUID:87217962; PMID:3646943
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Attantive proteinase (EC 3.4.21..) - pig (tentative sequence) (fragments)
N.Alternate names: pancreatic elastase II [misidentification]
S.Species: Sus scrofa domestica (domestic pig)
C.Date: 05-Jun-1987 #sequence_revision 05-Jun-1987 #text_change 31-Mar-2000
C.Accession: A23473

COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25 (EPO)
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/154,344
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 13, Application US/09154344

Patent No. 5981256

GENERAL INFORMATION:
APPLICANT: Egelrud, Torbjorn
APPLICANT: Hansson, Lennart
TITLE OF INVENTION: Recombinant Stratum Corneum
TITLE OF INVENTION: Recombinant Stratum Corneum
TITLE OF INVENTION: Enzyme (SCCE)
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESSE:
ADDRESSEE White & Case, Patent Department
